

AAX_CLogTaperDelegate
::NormalizedToReal

AAX_CLogTaperDelegate
::RealToNormalized

AAX::SafeLog

```
graph LR; A["AAX_CLogTaperDelegate  
::NormalizedToReal"] --> B["AAX::SafeLog"]; C["AAX_CLogTaperDelegate  
::RealToNormalized"] --> B;
```

The diagram illustrates a relationship between two methods of the `AAX_CLogTaperDelegate` class and a static method `AAX::SafeLog`. Two white rectangular boxes on the left represent the methods `NormalizedToReal` and `RealToNormalized`. Two blue arrows originate from the right side of these boxes and point towards a gray rectangular box on the right, which represents the `AAX::SafeLog` method. This indicates that both `NormalizedToReal` and `RealToNormalized` delegate the logging operation to `AAX::SafeLog`.
